

Business Requirements Document (BRD)

Project Name: Event Management System

Prepared By: Rudhran Balakumar, Sharon Wilbur

Date: 09-04-2025

1. Executive Summary

The Event Management System (EMS) is a web-based platform designed to simplify event planning, booking, and management. It offers role-based access for Admins, Customers, Vendors, and Guests to ensure efficient collaboration. The system automates key tasks such as event booking, guest list management, RSVP tracking, vendor coordination, and financial reporting, reducing manual efforts while improving efficiency. Real-time updates, email notifications, and structured workflows help ensure seamless event execution and enhanced user experience.

2. Project Objectives

- Develop a centralized system for event planning and execution
- Automate guest invitation handling and RSVP tracking
- Implement role-based authentication for secure access control
- Enable vendor service tracking and payment management
- Generate financial insights for event budget monitoring

3. Project Scope

Included Features

- User Authentication - Secure login with role-based access
- Event Booking - Customers can book, edit, and customize events
- Guest Management - Upload guest lists and track RSVP responses
- Vendor Coordination - Assign vendors and monitor their task status
- Financial Reports - Expense tracking and budget breakdown

Excluded Features

- External payment gateway integration (planned for future versions)
- Advanced analytics dashboards (not included in this phase)
- Mobile app development (limited to web-based functionality)

Business Requirements Document (BRD)

4. Business Requirements

Requirement	Description
Authentication	Secure login with role-based access control
Event Booking	Customers can create, edit, and cancel events
Guest Invitations	Automated email invitations with RSVP tracking
Vendor Management	Assign vendors and monitor service completion
Financial Reports	Track event expenses and generate budget analytics

5. Key Stakeholders

Role	Responsibilities
Admin	Manages bookings, vendors, guest lists, and budgets
Customer	Books events, selects services, uploads guest lists
Vendor	Provides services such as catering, decoration, etc.
Guest	Receives invitations and confirms RSVP

6. Project Constraints

- Must be completed within the defined project timeline
- Should be built within the current company infrastructure
- Must support scalability for future enhancements
- Must comply with security standards, including role-based authentication
- No external payment gateway integration in the current phase

Business Requirements Document (BRD)

7. Impact & Value Analysis

Area	Impact
Productivity	Reduces manual work, automates event coordination
User Experience	Simplifies event booking and vendor collaboration
Automation	Handles invitations, RSVP tracking, and reporting automatically
Scalability	Supports future growth and integration with mobile applications
Data Insights	Provides financial and RSVP analytics for better decision-making

8. Next Steps for Implementation

- Test APIs for user authentication, event booking, and RSVP tracking
- Develop UI/UX for intuitive event booking and dashboard navigation
- Deploy the system internally before expanding to external stakeholders
