

Functional and Non - Functional Requirements

Project Name: Event Management System

Prepared By: Rudhran Balakumar, Sharon Wilbur

Date: 09-04-2025

1. Functional Requirements

User Authentication & Access Control

- The system must allow users to sign up and log in securely.
- Rolebased access must be enforced for Admin, Customer, Vendor, and Guest accounts.
- Admins should have full control over event configurations and user management.

Event Booking & Management

- Customers must be able to book events, edit details, and cancel bookings.
- Admins should be able to define event categories and assign venues.
- The system must support customizable event services (catering, decoration, seating).

Guest List Handling & Invitations

- Customers must be able to upload guest lists via a CSV file.
- The system should send email invitations to guests.
- Guests should have the ability to confirm or decline RSVP through the system.
- Admins should have access to realtime RSVP tracking.

Vendor Management

- Admins must be able to assign vendors to events.
- Vendors should be able to view their assigned tasks and update their service status.
- The system must track payments made to vendors.

Financial Tracking & Reporting

- Admins should be able to view budget allocations for events.
- Customers should see estimated costs before booking an event.
- The system should generate monthly reports on event expenses and vendor payments.

2. NonFunctional Requirements

Security & Data Protection

- User passwords must be encrypted and stored securely.
- The system must implement role based access control to prevent unauthorized access.
- Sensitive data such as payment details must comply with security standards.

Functional and Non - Functional Requirements

Performance & Speed

- Event bookings must be processed within 2 seconds.
- The system should handle concurrent users without lag.
- RSVP tracking must update instantly when guests respond.

Scalability & Reliability

- The platform should be able to support future expansion for larger events.
- The system should maintain 99.9% uptime to ensure availability.
- The database must handle high volumes of guest list uploads efficiently.

Usability & Accessibility

- The UI should be intuitive and user friendly, requiring minimal training.
- The system must be accessible via desktop and mobile devices.
- The homepage should provide quick navigation to event booking and guest tracking.

Email & Notification System

- Email invitations should be sent instantly with a retry mechanism in case of failure.
- Reminder emails for RSVP responses must be automatically triggered.
